Special Interest Model Books, United Kingdom, 1998. Paperback. Book Condition: New. 232 x 186 mm. Language: English . Brand New Book. This exciting book breaks new ground by introducing the amateur to the ideas and concepts, both theoretical and practical, of robotics - a nascent discipline which will radically change the way we work. Although today we use the term robots , in the future other terms will have to be coined in order to describe their utility capabilities. The book is divided into two sections: 1: How and why robots work and how they are controlled. 2: How to make a simple two-legged humanoid robot that can be programmed to walk. There are no complicated formulae or equations to grapple with or complicated circuit diagrams to decipher, and you don t have to be either a machinist or a programmer - everything is presented in clear, concise, everyday English. The robot can be built quickly on a workbench, or even a kitchen table, with a minimum number of handtools, and all the parts are easily available in the UK and the USA. This is a fascinating and unique book which explains the basics of a subject which is the next generation of model engineering, combining construction skills with computer programming and teaches you to build and run a working robot which can be controlled from any personal computer.
