Springer. Paperback. Book Condition: New. Paperback. 416 pages. Dimensions: 9.2in. x 6.1in. x 0.9in. These proceedings are based upon the review lectures, the research talks and the accompanying discussion from the NATO Advanced Study Institute on The Dynamical and Chemical Coupling of the Neutral and Ionized Atmosphere held at Spatind, Norway April 12-22, 1977. In recent years, in spite of the many subdivisions of atmospheric physics it has become clear that a complete understanding of the subject matter requires an interdisciplinary effort of the scientists working on a variety of atmospheric phenomena. This Advanced Study Institute was organized in order to meet this demand. A number of eminent scientists were invited to review the major subfields in atmospheric physics and expose the areas where the coupling between the neutral and ionized atmosphere is evident. These review papers were supported by current research results. However, the material covered here is by no means complete considering the range of subject matter covered by the title. The responsibility for this inadequacy lies with the editors and the program committee, rather than with the individual contributors. Oslo, June 1977. B. Grandal J. A. Holtet.
