Oxford Elsevier LTD Apr 2016, 2016. Taschenbuch. Book Condition: Neu. 233x189x27 mm. Neuware - Calculations in Molecular Biology and Biotechnology, Third Edition, helps researchers utilizing molecular biology and biotechnology techniques-from student to professional-understand which type of calculation to use and why. Research in biotechnology and molecular biology requires a vast amount of calculations. Results of one data set become the basis of the next. An error of choosing the wrong type of equation can turn what would have been a successful research project or weeks of labor and research into a veritable house of cards. It could be how you calculated the medium in which you test your sample to calculating how long it takes a sample to grow to calculating the synthesis of multiple variables. In one easy to use reference, Stephenson reviews the mathematics and statistics related to the day-to-day functions of biotechnology and molecular biology labs, which is a sticking point for many students, technicians, and researchers. The book covers all of the basic mathematical and statistical needs for students and professionals, providing them with a useful tool for their work. Features comprehensive calculations in biotechnology and molecular biology experiments from start to finish Provides coverage ranging from basic scientific notations to complex subjects like nucleic acid chemistry and recombinant DNA technology Includes recent applications of the procedures and computations in clinical, academic, industrial, and basic research laboratories cited throughout the text Features new coverage of digital PCR and protein quantification including chromatography and radiolabelling of proteins Includes more sample problems in every chapter for readers to practice concepts 481 pp. Englisch.
